                                           The invention relates to a crystal of protein kinase Bbeta (PKBbeta). Three-dimensional protein coordinate data is given in the specification. Also disclosed is a method for determining the structure of a PKB derivative, analysing a PKBbeta-ligand complex, determining a three-dimensional structure for a target kinase, and a computer system or computer-readable media containing atomic coordinate data listed in the specification. The crystal of PKBbeta, and methods are useful in modulators of protein kinases, particularly AGC kinases, for identifying modulators of protein kinases activity, and for structural analysis of other protein kinases. The crystal may also be used in manufacturing a medicament for treating cancers, diabetes, erectile dysfunction or
                                                                                                                                                                                                                                                                          or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         therapy. The crystal of PKBbeta, and methods from the present invention, are useful in activating protein kinases, particularly AGC kinases, for identifying modulators of protein kinases activity, and for structural analysis of other protein kinases. The crystal may also be used in manufacturing a medicament for treating cancers, diabetes, erectile dysfunction or neurodegeneration. The present sequence represents a peptide which is used in the exemplification of the present invention
               medicament for treating cancers, neurodegeneration. The current sprotein kinase B assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protein kinase Bbeta; PKBbeta; cytostatic; antidiabetic; vasotropic; nootropic; neuroprotective; gene therapy; cancer; diabetes; erectile dysfunction; neurodegeneration; protein co-ordinate data;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                  The present invention relates to small molecules that are protein kinase regulators, activators and inhibitors, compositions containing such compounds and their pharmaceutical use. The invention is useful for the prevention or treatment of a disease related to an AGC kinase such as cancer, diabetes, neurodegenerative diseases, Alzheimer's disease, Parkinson's disease, AIDS associated dementia, amyotrophic lateral sclerosis, multiple sclerosis, schizophrenia, cardiomycete hypertrophy, reperfusion, ischemia and baldness. The present sequence is an activated protein kinase B beta (PKBbeta) peptide, PIFtide. PKB belong to the AGC protein kinase B beta (PKBbeta) peptide, PIFtide.
                                                                                                                                                                                                                                                                                                                                           New ketone, amide, ester and carbonyl derivatives useful for treating e.g. cancer, multiple sclerosis, amyotrophic lateral sclerosis, Alzheimer's disease, Parkinson's disease, reperfusion, ischemia and

                                                                                                                                                                                                    cc specificity of PDK1 are useful for manufacturing a medicament for cureating a patient who is in need of modulation of the insulin signalling creating a patient who is in need of modulation of the insulin signalling compatible of pathway and/or PDK1, PDK2 or PRK2 signalling. A compound that is capable compatible of reducing the activity (i.e. the PDK1 and/or the PDK2 activity) of PDK1 may be useful in treating cancer. PDK1, e.g. via protein kinase B and/or SGK, may be capable of providing a survival signal that protects cells from apoptosis induced in a variety of ways. Reduction of the activity of PDK1 may promote apoptosis and may be useful in treating cancer. Conditions in which aiding apoptosis may be of benefit may also include cresolution of inflammation. A compound capable of increasing the activity of PDK1 may be useful in treating diabetes or obesity, or may be useful in inhibiting apoptosis. Increased activity of PDK1 may lead to increased clevels of leptin, which may lead to weight loss. The compounds may clearly or suppress apoptosis, which may aid cell survival during or following cell damaging processes and in treating disease in which apoptosis is involved. Examples of the disease for example stroke and movecardial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a method for altering the substrate specificity of phosphoinositide-dependent protein kinase 1 (PDK1), by exposing it to an interacting polypeptide. Included in the invention are a preparation comprising PDK1 and an interacting polypeptide, PDK1 with altered specificity is useful for phosphorylating a residue corresponding to the Ser/Thr residue of a substrate with the following peptide Phe/Tyr-Xaa-Xaa-Phe/Tyr-Ser/Thr-Phe/Tyr. Altered PDK1 is also used for phosphorylating protein kinase C related protein kinase 2 (PRK2). The compound identified by methods of the invention that are capable of altering the substrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Substrate specificity; phosphoinositide-dependent protein kinase 1; PDK1; protein kinase C related protein kinase 2; PRK2; cancer; apoptosis; mechanical tissue damage; ischaemic disease; stroke;
                                                                                                    tissue injury or ischaemic disease, for example stroke and myocardial infarction, or neural injury. The present sequence represents a region protein kinase C related protein kinase 2 (PRK2) which interacts with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Altering substrate specificity of kinase 1, to phosphorylate Ser473 interacting polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2000-647155/62

CC Ser/Thr residue of a substrate with the following peptide Phe/Tyr-Ser/Thr-Phe/Tyr. Altered PDK1 is also used for phosphorylating CC Phe/Tyr-Ser/Thr-Phe/Tyr. Altered PDK1 is also used for phosphorylating CC protein kinase C related protein kinase 2 (PRK2). The compound identified CC by methods of the invention that are capable of altering the substrate specificity of PDK1 are useful for manufacturing a medicament for CC treating a patient who is in need of medulation of the insulin signalling pathway and/or PDK1, pDK2 or PRK2 signalling. A compound that is capable of reducing the activity (i.e. the PDK1 and/or the PDK2 activity) of PDK1 CC May be useful in treating cancer. PDK1, e.g. via protein kinase B and/or CC SGK, may be capable of providing a survival signal that protects cells from apoptosis induced in a variety of ways. Reduction of the activity of PDK1 may promote apoptosis and may be useful in treating cancer. CC Conditions in which aiding apoptosis may be of benefit may also include resolution of inflammation. A compound capable of increasing the activity of PDK1 may be useful in treating diabetes or obsesity, or may be useful in hibiting apoptosis. Increased activity of PDK1 may be defined to increased activity of PDK1 may be useful in treating diabetes or obsesity, or may be useful in hibiting apoptosis, which may aid cell survival during or following cell damaging processes and in treating diabetes or benefit may lead to increased include. The poptide is and my cardial consideration, or neural injury. The present sequence represents a potential poptosis is substrate peptide. The peptide is capable of altering the substrate considerity of PDK1 in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to a method for altering the substrate specificity of phosphoinositide-dependent protein kinase I (PDKI), by exposing it to an interacting polypeptide. Included in the invention are a preparation comprising PDKI and an interacting polypeptide, PDKI with altered specificity is useful for phosphorylating a residue corresponding to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Substrate specificity; phosphoinositide-dependent protein kinase 1; PDK1; protein kinase C related protein kinase 2; PRK2; cancer; apoptosis; mechanical tissue damage; ischaemic disease; stroke; myocardial infarction; antigenic peptide.

                                                  commodilates protein kinase activity. The method comprises measuring the cability of the compound to inhibit, promote or mimic the interaction of a chydrophobic pocket-containing protein kinase with an interacting compression of the protein kinase with an interacting polypeptide. The interacting polypeptide interacts with the hydrophobic pocket of the protein kinase and/or comprises the amino acid sequence compounds of the protein kinase and/or compounds in screening assays for developing pharmaceutical compounds or drugs. Compounds polypeptides or comply containing in the manufacture of a medicament for treating a patient in medicine, and the manufacture of a medicament for treating a patient in compound of modulation of signalling by a hydrophobic pocket-containing composition of protein kinase. Specifically, the patient has cancer or diabetes or is in need of inhibition of apoptosis, e.g. a patient suffering from tissue composition of also useful for inhibiting the degree or rate of phosphorylation by the protein kinase. The interacting polypeptide or compound is useful in composition is also useful for inhibiting the degree or rate of phosphorylation by the protein kinase. The interacting polypeptide or compound is useful in composition of stabilising a hydrophobic pocket-containing protein kinase, where the protein kinase is exposed to the compound or polypeptide. Composition the compound or polypeptide composition of protein kinase is exposed to the compound or polypeptide. Composition the protein kinase is exposed to the compound or polypeptide. Composition of protein kinase is exposed to the compound or polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SSX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method for identifying a compound that modulates protein kinase activity. The method comprises measuring the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying modulators of protein kinase (PK) activity, useful in developing drugs for treating cancer or diabetes, by measuring the ability of the compound to modulate or mimic the interaction of PK with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 24

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                          The present invention describes a method for identifying a compound that CC modulates protein kinase activity. The method comprises measuring the ability of the compound to inhibit, promote or mimic the interaction of a CC hydrophobic pocket-containing protein kinase with an interacting cC polypeptide. The interacting polypeptide interacts with the hydrophobic pocket of the protein kinase and/or comprises the amino acid sequence CC phe/Tyr-Xaa-Xaa-Phe/Tyr (I). The method is useful in screening assays for CC developing pharmaceutical compounds or drugs. Compounds, polypeptides or CC particularly in the manufacture of a medicament for treating a patient in need of modulation of signalling by a hydrophobic pocket-containing CC protein kinase. Specifically, the patient has cancer or diabetes or is in CC need of inhibition of apoptosis, e.g. a patient suffering from tissue CC injury or ischaemic injury, including stroke. The compound or composition is also useful for inhibiting the degree or rate of phosphorylation by CC the protein kinase. The interacting polypeptide or compound is useful in methods of stabilising a hydrophobic pocket-containing protein kinase, CC where the protein kinase is exposed to the compound or polypeptide.

CC AAB99786 to AAB99847 represent amino acid sequences, and AAH44210 and CC of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cycle. It is required in higher cells for entry into S-phase and mitosis. Component of the kinase complex that phosphorylates the repetitive C-terminus of RNA polymerase II. Catalytic component c NPF (By similarity).

SUBUNIT: Forms a stable but non-covalent complex with cyclin B ir mature oocytes (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                preliminary data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Kinase
                                                                                                                                                                                                                                                                                                                                                                                           NUCLEOTIDE
                                                                         preliminary data.

FUNCTION: Plays a key role in the control of the eukaryotic cell cycle. It is required in higher cells for entry into S-phase and mitosis. Component of the kinase complex that phosphorylates the repetitive C-terminus of RNA polymerase II. Catalytic component categories in the similarity).

MPF (By similarity).

CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

SUBUNIT: Forms a stable but non-covalent complex with cyclin B in mature oocytes (By similarity).

SIMILARITY: Belongs to the Ser/Thr protein kinase family.

SIMILARITY: Contains 1 PH domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             \vdash

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Brodbeck D., Hill N.M., Hemmings B.A.;

"Two splice variants of PKB gamma have different regulatory capacity depending on the presence or absence of the regulatory phosphorylation site Ser-472 in the C-terminal hydrophobic domain.";

J. Biol. Chem. 276:2950-29558(2001).

-i. FUNCTION: IGF-1 leads to the activation of AKT3, which may play a role in regulating cell survival. Capable of phosphorylating several known proteins. Truncated isoform 2/PKB gamma 1 without the second serine phosphorylation site could still be stimulated but to a lesser extent (By similarity).

-i. CAPALTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

-i. SUBCELLULAR LOCATION: Cytoplasmic and membrane-associated after cell stimulation leading to its translocation.

ItsoID=SpECIFFCITY: Isoform 1 is expressed in prostate, testis and mammary gland.
Lestis and mammary gland.
DCMAIN: Binding of the PH domain to the phosphatidylinositol 3-
Kinase alpha (PI(3)K) results in its targeting to the plasma
                                                                                                                                                                                                                              membrane.

PTM: Phosphorylated on threonine and serine residues.

Phosphorylation on both sites is required for full activit similarity: Belongs to the Ser/Thr protein kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ALTERNATIVE PRODUCTS:

Binds MyD88 via their respective TIR domains (By similarity). SUBCELLULAR LOCATION: Type I membrane protein. Plasma membrane iphagosomes (By similarity).

TISSUE SPECIFICITY: Ubiquitous. Highly expressed in spleen, ova: peripheral blood leukocytes, thymus and small intestine. SIMILARITY: Belongs to the Toll-like receptor family. SIMILARITY: Contains 8 LRR (leucine-rich) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          by the UniProt Consortium, see http://www.uniprot.org/terms under the Creative Commons Attribution-NoDerivs License
